CF-9000 CE CF-9000 CE Analyzer

Portable 2-channel / 4-channel FFT Analyzer CF-9000 Series

Innovative features in a tough body

ονοζοκκι

The right tool for quickly making decisions and A reliable partner that accepts no compromise.

Portable FFT analyzer

-

Speedy

COLUMN 1

Keys and a touch panel for quick, light and intuitive operation

F-92

[For 2-channel analysis]

With the CF-9200/9400, basic FFT analysis operations such as display, measurement, stopping, recording and readout can be made positively and quickly through the large hard keys. The touch panel provides an intuitive interface, allowing the operator to easily perform speedy and reliable operations by a swipe or tap with fingers on the screen, such as selecting the number of waveforms displayed and scaling of the X and Y axes to the desired scale.

Flexible

5 hours*¹ of continuous cordless operation. Replacement of batteries while powered on

92

[For 4-channel analysis]

The CF-9200/9400 includes the two on-board, large capacity lithium ion secondary batteries which enable continuous cordless operation of 5 hours^{*1}. The hot swap feature which allows battery replacement while it is power-on enables continuous measurement operation of analysis and recording without interruption. The built-in battery in the main unit can also be charged while in operation.^{*2}

*1 CF-9400 4ch, when CCLD is ON.

*2 Full recharge takes 8 to 9 hours (depending on the usage conditions) with the power on, and 4.5 to 5 hours with the power off (at operating environment 20 C°).

taking action.

The CF-9200/CF-9400 is an all-in-one portable FFT analyzer. All FFT analysis operations can be performed with the integrated hard keys and capacitance type touch panel without requiring a PC.

DICTOLOGICA CONTRACTOR

CACIFICATION OF THE ADDRESS OF THE A

Newly developed exclusive 100 kHz high-performance analysis front-end system incorporating 24-bit A/D converter analyzes sound and vibration of a piping/pump in a factory plant, motor, automobile, railway vehicle, mechanical instruments including home electrical appliances, and electrical /electronic parts.

The CF-9200/9400 help to find solutions for field workers in their FFT analysis including the resonance and frequency characteristics of mechanical structures by using an electromagnetic exciter or an impulse hammer.

Discontinued (Reference only)

Versatile

FFT, RTA, excitation control & simultaneous recording

The CF-9000 series are compact and versatile to carry out various operations including linear/log, sweep analysis using signal output, amplitude control of electromagnetic exciter*³, as well as FFT Analysis, real-time octave analysis^{*1}, and rotation tracking analysis^{*2}.

It can also perform simultaneous analysis and recording operations, allowing offline analysis by CF-9200/9400 main unit and software applications^{*4}.

- *1 Real-time Octave Analysis (RTA) (CF-0923) is required.
- *2 Tracking Analysis (CF-0922) is required. *3 Log Sweep/Excitation Control (CF-0942) is required.
- *4 Please refer to P.10, 11 for details.

Quiet

Silent and non-vibration by fan-less & spindle-less structure

Fan-less and spindle-less structure prevents occurrence of mechanical sound and vibration. The CF-9200/9400 itself does not become the cause of sound and vibration, and not disturb measurement and recording in a field. By installing wireless LAN adapter, you can operate remotely* without touching the main body of the CF-9200/9400.

Dynamic and Steady Various function designed through accumulated

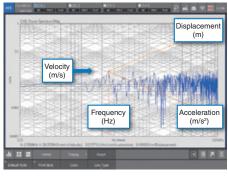

Real-time tripartite graph display / Vibration criterion curves

The CF-9200/9400 are equipped with real-time tripartite graph^{*1} display as a new standard function. Three amplitude values (acceleration (m/s^2), velocity (m/s) and displacement (m)) at any arbitrary frequency can be read simultaneously in real time during FFT analysis of vibration.

By processing 1/3 octave and displaying VC curves^{*2} (Vibration Criterion Curves), allowable vibration reference or setting environment evaluation of vibration sensitive instrument, such as AFM, electronic microscope, and Laser interferometer is able to be judged quickly.

You do not need to operate differential and integral processing individually by using the frequency analysis function and conversion of amplitude values as before. Therefore, this function enables you to read three amplitude values quickly.

- *1 The tripartite graph (diagram) enables you to read amplitude values of acceleration (m/s²) and displacement (m) which is based on velocity (m/s), on the frequency (Hz) axis.
- *2 VC Curve is proposed as a guide of allowable small vibration for setting precise machinery. Evaluation in 1/3 octave band width when VC Curve is used. It is divided in total 5 stages at an interval of 6 dB (VC-A, VC-B, VC-C, VC-D and VC-E) by the aim of usage for various instruments such as light microscope or laser equipment with long light path.

Wide dynamic range

The CF-9200/9400 feature a new 94-bit A/D front-end system, offering more than 21 do wide dynamic range. Changing votage range due to A/D over is not required by this function anymore, which had been frequently performed in general acoustic or vibration measurement. Wide dynamic range allows more efficient measurement and data recording, easier to operate even for novices.

CONCUCACIÓN DE LA CONCUCACIÓN

Isolated all inputs

All signal input channels are isolated (insulated). With high resistance to ground loops and super imposed noise, the main unit offers highly reliable measuring performance even in locations which is prone to potential difference. The isolation scheme also protects the crucial areas of the FFT system from sensors or signals that can be exposed to harmful transient voltages.

Equipped with CCLD^{*1}, applicable to TEDS^{*2}

Each channel of the CF-9200/9400 is equipped with CCLD (power supply for sensors) which can directly drive an accelerometer with built-in preamplifier, a charge converter for charge output type accelerometer, and a measurement microphone. TEDS reads data retained in a TEDS sensor and allows supplying the power to the sensor and performing the unit calibration automatically.

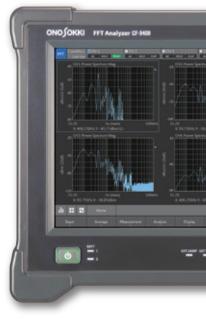

*1 What is CCLD (Constant Current Line Drive)?

It means a sensor interface using constant current supply. CCLD for an accelerometer with built-in preamplifier or a microphone preamplifier enables direct connection to an FFT Analyzer without using external amplifier. 2 to 4 mA of CCLD is commonly used.

*2 What is TEDS (Transducer Electronic Data Sheet)?

It is a standardized method which describes the information relevant to a measurement sensor. It is defined in the IEEE 1451 series. As information of a TEDS sensor is automatically read to the TEDS available measurement devices, the user is ready to take measurements. It can avoid setting error and also saves you time and effort of troubling calibration and measurement preparation.

CF-9400

CF-9200

technology on CF-9200 / 9400

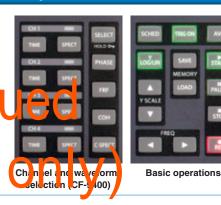

Easy operation through a touch panel interface

The CF-9200/9400 employ a 10.4 LCD capacitance type touch panel, allowing the operator to tap and swipe graphs. The band or gain which you have selected can be widened or narrowed with a simple and intuitive action. Only a simple gesture (finger movement) operation is needed to perform the following functions; fitting waveform amplitude to the graph scale, changing positions of waveform graphs, scaling of time axis and frequency axis, offsetting of waveform, and graph span adjustment.

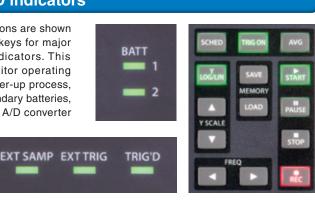

Reliable inputs with large hard keys

Operations such as turning the power on and off, changing data types and saving data are carried out using the new large hard keys. An excellent operational feeling of these keys assists fast and correct input even in unstable or narrow space and prevents data reissing or milfunction. Lock nunction. (HOLE) for hard keys and touch panel are equipped in order to prevent unintended inputs and setting changes.

Highly visible LED indicators

Statuses of major FFT operations are shown by LED indicators. The hard keys for major functions also have LED indicators. This enables the operator to monitor operating state of FFT, such as the power-up process, the charging state of the secondary batteries, and the excessive input to an A/D converter even from a distance.

Cable disconnection detecting function

When cable disconnection detecting function is on, the CF-9200/9400 automatically detects cable disconnection or connector trouble of an accelerometer and a microphone*, preventing trouble before measurement.

* Microphone with a built-in constant current line drive (CCLD) type preamplifier.

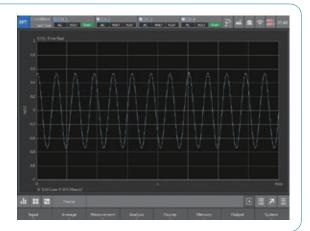

From the laboratory to the field, real-time waveform and simultaneous waveform recording are achieved

CF-9200 / 9400

FFT Basic Analysis Function

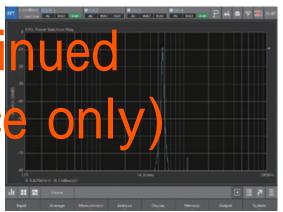

Time-axis Waveform

Performs A/D conversion of the voltage signal of vibration, noise, distortion, current probe, etc. coming from a sensor and displays the result as time-domain data. The X and Y-axis values at any point can directly be read using the search cursor. The delta cursor function makes it easier to read the time difference and level difference. The time-axis data statistical processing function enables quantitative time waveform analysis and diagnosis of such items as mean value (MEAN), root mean squared value (RMS) and crest factor.

Power Spectrum

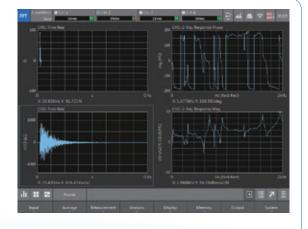

The power spectrum shows the main tube of each frequency component included in the time-axis windown which has been obtained with the FFT Analyzer, in the form of graph with the frequency on the horizontal axis by calculating the power of each frequency band (frequency resolution $\triangle f$). Power spectrum analysis en nons detection of each material itichs of a facility, which are difficult to be estimated twough measurement of vibration, noise level, and observation of time waveform. The natural frequency of a structure can also be measured.

Frequency Response Function

The frequency response function (FRF), in a mechanical system or an electrical circuit system, shows the input-to-output ratio as gain and phase characteristics on the axis representing frequency. The gain characteristics indicate how the amplitude of input signals changes as they pass through the transfer system being evaluated. The ratio of the output amplitude to the input amplitude is plotted on the Y-axis. The phase characteristics indicate phase advance/delay between the input and output signals with the Y-axis plotted in degrees or radians.

measurement / analysis with just one unit.

CF-9200 / 9400

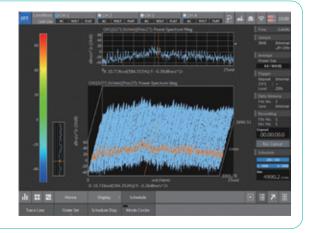

Optional Software for Analysis

Tracking Analysis (CF-0922)

CF-0922 Tracking analysis function automatically stores FFT values during calculating the vibration or noise which has occurred when rotating with wide variation speed, and analyzes the physical phenomena with reference to the rotation speed, such as vibration and noise changing with speed.

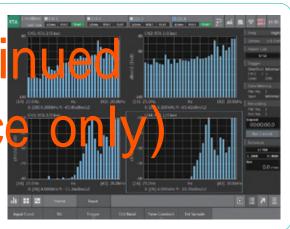

Since machines (rotary machine) turning at their axes including an engine, a gearbox turbine, and a motor turn in wide range of rotation speed from low to high, they may produce large vibration and noise by the resonance of component parts at specific rotation speed. To reduce the risk of destruction and to increase quietness, it is necessary to evaluate the relationship of natural vibration frequency between rotation speed and component parts.

By using the CF-0922 Tracking Analysis software, you can see and analyze the relationship between rotation speed and physical phenomena at specific rotation speed range in various expressions such as color map, 3D graph, and order components on the basis of one rotation.

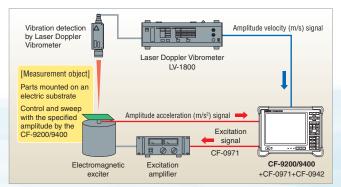

Real-time Octave Analysis (RTA) (CF-0923)

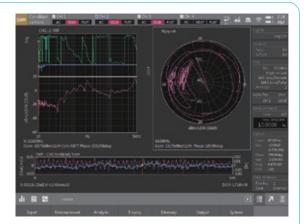

The highest note of an octave has were the required of the octave's lowest note. As the teeling of him an meaning has characteristics in equal ratio to frequencies, the Real-time Octave Analysis (RTA) software (CF-0923) is an effective tool for noise analysis. The sound pressure level of event band can be obtained through band-pass filter whim is defined by tendard (finited by readard (finited by octave in the noise frequency range to be measured.

Log Sweep / Excitation Control (CF-0942)

The Log Sweep function is used to evaluate the resonance points of a transfer system by continuously changing the frequency of the driving sine waves from the 1ch Signal Output Module (CF-0971). By sine-sweeping the frequency axis with a logarithmic scale, it is possible to obtain the gain and phase for each single frequency and an accurate response function with a high S/N ratio. The Excitation Control limits the amplitude of an electromagnetic exciter to a desired range, enabling vibration testing without considering the frequency characteristics of the exciter.

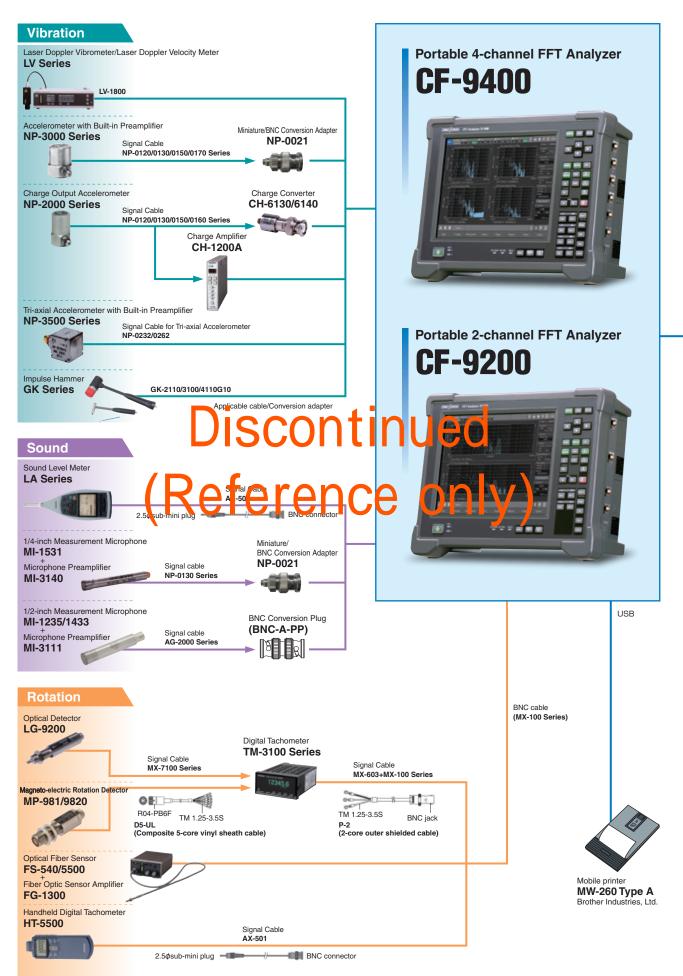

* 1 ch Signal Output Module (CF-0971) is required for this software.

System Configurations

From detection to processing, analysis, and graph creation. The CF-9200/9400 are supported by a wide range of peripherals including sensors for excitation, sound, vibration and rotation.

CF-9200 / 9400

Memory & Interface

CF-9200/9400 have wide variety of memory mediums and interfaces including wire/wireless, such as SSD (Solid State Drive) and SD/SDHC memory card. You can choose a suitable one according to the field or office environment.

MEMORY

SSD (Built-in CF-9200/9400)

SSD built-in the CF-9200/9400 can record and read waveforms, analysis data, waveform image, setting condition, and digital recording data. An SSD is less affected from noise and vibration because this medium does not have drive section which produces noise and vibration.

SD/SDHC Memory Card

The CF-9200/9400 have a memory card slot(×1) for SD/SDHC. Waveforms, analysis data, waveform images, setting conditions, and digital recording data can be recorded and read via an SD/SDHC memory card. Data which was recorded in a built-in SSD is copied and transferred easily into an SD card or a USB memory card.

USB memory

The CF-9200/9400 have USB A terminals $(\times 3)$. Waveforms, analysis data, waveform images, setting conditions, and digital recording data can be recorded and read via a USB memory. Data transfer and copy of data which has been stored in a built-in SSD are easy, such as data transfer/copy to a USB memory.

* Not all types of USB memory are guaranteed for the operation. Encripted USB memory cannot be used.

INTERFACE

USB mass storage class function

You can directly access the FFT measurement data and recorded data (ORF) which have been stored in a built-in SSD of the CF-9200/9400 by a Windows[®] -based PC.

It is easy to copy the stored data in the CF series to a PC.

PC environment conditions for connection Windows®7 (32 bit, 64 bit), Windows® 0 (3) bt, 4 bit) CONTINU

LAN Connection function Partly Option

Connecting the CF-9200/9400 to Windows®-based PC with LAN cable provides various operations as below.

·Copying and saving measurement data

- Operation remotely from a PC side using Remote Desktop Function*1
- Projecting the screen of the CF-9200/9400 by a projector
- •Controlling the CF-9200/9400 by program (CF-0947: LAN external control function (option) is required.)

PC environment conditions for connection Windows®7 (32 bit, 64 bit), Windows®10 (32 bit, 64 bit)

Wireless LAN connection function Option

Mounting wireless LAN adapter*² allows remote control*¹ of the CF-9200/9400 including screen display etc. by Windows[®]-based PC or mobile information terminal.

Bluetooth[®] connection function Option

Mounting Bluetooth[®] receiver^{*2} enables wireless output of graph displaying screen to a mobile printer^{*2} by PRINT button operation. A keyboard can also be connected wirelessly.

*1 Microsoft® Remote Desktop is used. *2 Please use the recommended product by Ono Sokki.

CF-9200/9400 × 0 Series

O series software is useful for secondary processing for the data recorded by the CF-9200/9400. By import and browse of the data. O series software helps smooth data organization, processing, analysis and graph creation.

Data file (binary format) of FFT Analyzer (Ono Sokki)

Tracking Analysis data file (binary format) of FFT Analyzer (Ono Sokki)

Schedule diagram data file (binary format) of FFT Analyzer (Ono Sokki)

Time domain record file of FFT Analyzer (Ono Sokki)

OC-1300 Series Toolbox

The OC-1300 Toolbox software system supports organization and graph creation of the data which has been obtained by FFT Analyzer. Two kinds of software tool support visualization of the obtained data.

OS-2000 Series

Time-series Data Analysis Tool

The OS-2000

series can freely edit, process, and analyze time-series data recorded by the CF-9200/9400. This software enables advanced data processing and analysis such as calculus processing of time series data recorded, playback of recorded data, filter processing, sound fluctuation analysis etc.

The OS-2000 series allows to edit and analyze long time-series data freely that is not able to be handled by Microsoft® Excel®. Various data formats of recorder made by other company are able to be used as well as general formats including CSV and WAVE. Simultaneous display, side-by-side display, and overlapping display are enabled without restriction of data format or sampling frequency.

2. Display Unit

Size	10.4-inch
Resolution	800 × 600 dots*
Method	TFT color LCD with capacitance type touch panel
Brightness adjustment	2 levels (bright/dark)
Lighting (Back light)	LED

* The ratio of the number of effective dots: 99.999 % or more.

3. Operation Section

The TFT color LCD is created by the full use of advanced technology. However, the pixels (dots) of non-lighting or always lighting occasionally exist in the display. (The ratio of the number of effective dots: 99.998 % or more of 800 x 600 dots.) Also, unevenness of the color or brightness may be visible depending on the viewing angle or the temperature change. This is not a product failure, so please note that return or exchange of the product cannot be accepted.

FFT calculation		+/-/± (Internal trigger) +/- (External trigger) E single-precision format)	

1 TEDS information may not be read depending on the type of the TEDS tip included in a sens Please consult your nearest distributor or Ono Sokki sales office nearby.

5. Processing Functions

Time domain	Time waveform/auto-correlation function/cross-correlation function	
	impulse response/cepstrum	
Amplitude domain	Amplitude probability density function/amplitude probability	
	distribution function	
Frequency domain	Power spectrum/Tripatite graph*/Fourier spectrum/liftered spectrum/	
	cross spectrum/frequency response function/coherence function/	
	coherence output power	
Calculation function	Mean value/absolute mean value/rms value/standard deviation/	
(Time-axis statistical	maximum value/minimum value/crest factor/skewness/kurtosis	
processing)		

* 1/3 oct VC Curves: Display is selectable from VC-A to VC-E. 1/3 oct: Bundled octave processing.

6. Memory Functions

Recording device	Selectable from internal	storage in main unit or SD/SDHC card	
Recording function	Frequency range	100 kHz (max.)	
	Recording channel	Ch1/Ch2 (CF-9200),	
		Ch1 to Ch4 (CF-9400)	
		Also rotation information recording	
		is possible.	
	Recording time	Approx. 32 min.	
		(At 50 kHz range 4ch recording,	
		rotation information OFF, (max. 4 GB))	
	Marker	Pressing [ESC] during recording	
		allows marking.	
	Recording format	ORF	
	Maximum recording	Internal storage approx. 6 GB	
	capacity	SDHC memory card (32 GB max.)	
Data file	9990 (999 data \times 10 blocks) data		
	DAT/TXT/BMP (Data can be saved simultaneously in three formats (TXT and BMP selectable))		
Panel condition memory	Memorizes and recalls measurement conditions. (50 types max.)		
Handwritten memo	Hand written memo on th	ne touch panel can be recorded.	
memory			

9. General Spec	cification		
Power supply	AC adapter or batteries (Both provided as standard)		
Power consumption	CF-9400	87 VA or less (When AC adapter is used,	
	(When the CF-0971	not battery charging)	
	Signal Output option is	150 VA or less (AC adapter is used,	
	installed.)	battery charging)	
	CF-9200	73 VA or less (AC adapter is used,	
	(When the CF-0971	not battery charging)	
	Signal Output option is	150 VA or less (AC adapter is used,	
	installed.)	battery charging)	
Operating temperature	0 to +40 °C (Humidity 20	to 80 % RH, with no condensation)	
range			
Storage temperature	-10 to +50 °C (Including lithium ion secondary batteries)		
range	(Humidity 20 to 80 % RH, with no condensation)		
Functional ground	Grounding terminal for noise elimination		
terminal	(M3, binding head screw M3×L6 recommended)		
Outer dimensions	Smaller than 333(W)×248(H)×112(D) mm		
	*Not including handle, stand or protruded sections.		
Main unit cooling	Naturally air-cooling (Far	nless)	
Weight	Without batteries: Appro:	x. 3.9 kg	
	With two batteries: Appro	ox. 4.9 kg	
CE marking	Applicable Low Voltage Directive: 2014/35/EU EN61010-1		
	EMC Directiv	e: 2014/30/EU EN61326-1	
	RoHS Direction	ve: 2011/65/EU EN50581	
Vibration resistance	9.8 m/s ² (Frequency 10 to 1	50 Hz, 150 min. in each of X, Y and Z direction)	
Shock resistance	500 m/s ² (11 ms duration)		

10. AC Adapter (PS-P20023A)		
Input voltage	100 to 240 VAC	
Input frequency	50/60 Hz	
Output voltage	Rated 16 V	
Output current	4 A	
Safety standard	PSE/CE/UL/GS

Not guaranteed all typ	es of SD, SDHC card.	·		unit is in operation	(Depends on the usage conditions)
				Charging time when the	Approx. 4.5 to 5 hours

8. Other Function			
Condition view	List display of specified conditions		
Clock Year, month, and date in western calendar			
	Hour, minute, and second display		
Operation sound/	Can be specified ON/OFF		
alarm sound			

		power OFF	
		External battery charger	Approx. 4.5 to 5 hours
		(Recommended product)	
* When ambient temperature is 10 °C or less, turn on the power of the main unit and or Charging is restricted or stopped when charging in a low temperature environment of less in the power off state.			

12. Accessory		
Accessories	AC adapter + power cable (2 m)	× 1
	Battery (lithium ion secondary battery)	× 2
	Instruction manual (User's guide)	× 1
	CD-ROM (Reference guide, utility, etc.)	× 1
	SDHC memory card (4 GB)	× 1
	USB cable (For USB mass storage class, 1.5 m)	× 1

Signal Output (CF-0971 TCH Sig	nal Output Module): Hardware Option						
Number of channels	1						
Output connector	BNC (Type C02)						
Isolation	Non-isolated						
Output voltage amplitude	±1 mV to ±10 V (amplitude+DC offset)						
Offset voltage	±10 V	±10 V					
Output format	Unbalanced output	Unbalanced output					
Output coupling	DC						
Protection circuit	Short-circuit protection						
Output impedance	0 Ω or 50 Ω±10 %						
Maximum output current	10 mA						
D/A convertor	16-bit						
Conversion rate	max. 512 kHz						
Output waveform	Sine wave/swept-sine/pseudo random/ra	andom/impulse					
THD and spurious	-75 dB or less (at sine wave 1 kHz, amp	litude ±1 V output)					
FFT Analysis length	256 to 16384						
Zoom analysis	Available (linked with the zoom analysis	Available (linked with the zoom analysis range)					
Voltage amplitude accuracy	±0.5 dB or less (at 1 kHz, 1 V _{0-p} , 1 MΩ lo	pad)					
Frequency accuracy	±50 ppm						
Digital filter	Smoothing filter	At baseband: 10th order ellipse					
		At zooming: 6th order ellipse					
	Octave band filter	1/1 or 1/3 octave					
		6th order Butterworth					
Pink filter	Analog method -3 dB/oct ± 1.0 dB (pres	scribed for 20 Hz to 20 kHz)					
Burst function	Single burst, continuous burst						
Burst cycle	Sine wave	1 to 32767 cycles					
	Swept-sine/pseudo random/ impulse	1 to 32767 FFT frames					
	Random	1 ms to 32 s					
Cycle setting unit and burst interval	Sine wave	Sine wave 1 cycle					
	Swept-sine/pseudo random/ impulse	1 FFT frame					
	Random	1 ms					
Taper function	Can be set individually when the signal is turned ON or OFF						
	1 ms to 32 s (1 ms-steps)						
	This function is not available when the burst function is ON.						
Spectrum flatness	20 kHz to 100 kHz	±1.0 dB or less					
	0 to 20 kHz	±0.2 dB or less					
Crest factor	Sinewave	Approx. 1.41					
	Scont	470-0X.14 tr 1 3 3 0 les 60					
	Impulse	32.0 or less					

Log Sweep/Excitation Control CF 0 Measurement mode (FRA mode	eterence only)				
Dynamic range					
Measurement frequency range	10 mHz to 100 kHz				
Frequency resolution (Log sweep)	10, 20, 40, 50, 80, 100, 120, 160, 200, 250, 300, 320, 400, 500 lines/decade				
Frequency resolution (Linear sweep)	10, 20, 40, 50, 60, 100, 120, 100, 200, 250, 500, 500, 600, 600 lines/decade				
Number of times of averagings	1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 20, 25, 30, 40, 50, 60, 80, 100, 120, 150, 180, 200 times and optional number of times				
Frequency range dividing setup mode	Addition times and signal output level can be changed for each measurement frequency range which is divided into up to 10.				
Frequency resolution auto adjusting function	Automatically adjusts the decade of each frequency band and resolution to see the frequency characteristics accurately.				
Frequency resolution increase function	Enables remeasurement of the specified frequency range resolution with a resolution 20 times the first measurement.				
Calculation function	Frequency axis differential and integral calculus function				
	(first order differential, second order differential, single integral, double integral), four arithmetic operation				
Display					
Display of Frequency Response Function	Bode diagram (horizontal axis: frequency/vertical axis: gain and phase)				
	Nyquist diagram (horizontal axis: real number part/vertical axis: imaginary number part) enables logarithmic				
	scale display of amplitude				
Display mode	FRE mode (triple screen display)				
	1)FRF (Bode diagram), COH (enables ON, OFF of display)				
	2)Nyquist or SPEC (1, 2ch overlay)				
	3)TIME, instantaneous spectrum (enables overlay display and specifying channel.)				
	List mode (single screen display)				
	1)Measurement condition				
	2)List of No./frequency/FRF gain/FRF phase/COH/FRF real number part/FRF imaginary number part/SPEC1/				
	SPEC2/number of summations for all measurement data				
	Peak List mode (double or triple screen display)				
	List of frequency, gain and phase on the FRF bode diagram display using two ways.				
	1. Peak point of gain (automatic search)				
	2. Optionally specified point				
	Memory mode				
	1)FRF of current status data				
	2)List of saved waveforms				
	3)Overlay display of waveforms selected from 2) (Up to 8 screens)				
	Calculation screen (Quad screen display)				
	1)FRF of current status data				
	2)FRF of saved data				
	3)Waveform of four arithmetic operations and differential and integral calculus of 1), 2)/ Waveform of open and close loop				
	conversion of 1), 2)				
	* Waveform of calculation result also can be displayed.				
	4)Nyquist diagram of calculation result of 3)				
Display function	Phase unwrap display				
	Search delta function				

Tracking analysis type	Phase				
0 7 71	Amplitude				
Sampling method	Constant ratio tracking (external sampling):				
	Up to maximum frequency analysis order				
	Constant width tracking (internal sampling):				
	Frequency range is the same as that of FFT analysis				
Number of FFT	256 to 16384 points (power-of-two step)				
sampling points					
Averaging function	Power spectrum exponential average				
	Fourier spectrum exponential average				
Max. analysis orders	6.25, 12.5, 25, 50, 100, 200, 400, 800				
Max. number of blocks	100, 200, 400, 800, 1000				
Analysis screen display	6 screens/list display of tracking available				
Display function	Time-axis waveform, frequency analysis (amplitude, phase),				
	order ratio analysis (amplitude, phase),				
	constant-ratio tracking analysis (amplitude, phase),				
	constant-width tracking analysis (amplitude, phase),				
	fixed-frequency tracking analysis (amplitude, phase),				
	time-tracking analysis (amplitude, phase),				
	3D map, Campbell plot				
Number of display	8 lines (excluding MAX ord, O.A)				
tracking diagrams					
Schedule function	Rotation schedule (with automatic judging				
	of decreasing rotation speed)				
	Time schedule (time trend)				
Upper and lower	UP (lower limit \rightarrow upper limit)				
limitation setting	DOWN (upper limit \rightarrow lower limit)				
of rotation	UP/DOWN (lower limit \rightarrow upper limit \rightarrow lower limit)				
	DOWN/UP (upper limit \rightarrow lower limit \rightarrow upper limit)				
Simultaneous recording	Available for constant-width tracking				
& analysis function					

Real-time Octave	Analysis (RTA) CF-0923			
Octave type	1/1 octave			
	1/3 octave (filter: 6th order Butterworth)			
	IEC 61260 Ed.1.0 (1995) Class 1, JIS C 1514: 2002 Class 1			
	ANSI S1.11: 2004 Class 1			
Time weighting	10 ms, 35 ms, 125 ms (FAST), 630 ms, 1 s (SLOW), 8 s			
(Time constant)	IMPULSE rising 35 ms/falling 1.5 s			
	IEC 61672-1: 2002 Class 1, JIS C 1509-1: 2005 Class 1			
Analysis frequency range	0.8 to 20 kHz (1/3 octave)			
	1 to 16 kHz (1/1 octave)			
Calculation function	Instantaneous value, maximum value of every one			
	second, maximum value hold, and minimum value hold,			
	power averaging value, power summation value,			
	linear Leq			
Analysis screen display	Up to 6 screens (Data overlay display available)			
	List display of real-time octave			
Simultaneous recording	Available			
& analysis function				
Option	CF-0922 (Tracking Analysis)			

LAN External Control Function CF-0947

<pre></pre>					
Client PC	OS Windows®				
		SP1 (64 bit/32 bit)			
Software	Microsoft [®] Visual Studio [®]	2012 (VB, C#)			
	Microsoft® Excel®	2007			
Network cable	LAN cable	Category 6
